

Core Java and Database Assignment

Important: Look at instructions at the end

Question: The task is to create a console-based application.

When we run the project, the following menu should display:

-----X-----X-----X-----X-----

Select an option:

1. Add a Book
2. Update a Book
3. Delete a Book
4. View a book
5. View all Books
6. Exit Menu

Your option: 1

Enter book name: Let Us C

Enter book price : 200

Enter book author : Yashwent Kanitkar

On clicking [Enter]

1. The details of the book must be inserted into database
2. Every time a book is added, an id must be autogenerated
3. Then again, the menu should be displayed.

So, on enter:

Result: [The book "Let Us C" is added successfully]

Again the menu should display:

Select an option:

1. Add a Book
2. Update a Book
3. Delete a Book
4. View a book
5. View all Books
6. Exit Menu

Your option: 1

Enter book name: Let Us C++

Enter book price: 300

Enter book author: Ramesh Das

Result: [The book "Let Us C++" added successfully]

(Add at least 3 books)

-----X-----X-----X-----X-----

Select an option:

1. Add a Book
2. Update a Book
3. Delete a Book
4. View a book
5. View all Books
6. Exit Menu

Your option: 5

[Another list of options:]

How do you want to display the list?

1. In Ascending order of id
2. In Descending order of id

3. In Ascending order of book name
4. In Descending order of book name
5. In Ascending order of price
6. In Descending order of price
7. Exit

Your option: 1 [Enter]

List of books in Ascending order of ids

id name price author

1. Let Us C 200 Yashwent Kanitkar
2. Let Us C++ 300 Ramesh Das
3. Java - TCR 450 Herbert Schildt

Again

How do you want to display the list?

1. In Ascending order of id
2. In Descending order of id
3. In Ascending order of book name
4. In Descending order of book name
5. In Ascending order of price
6. In Descending order of price
7. Exit

Your option: 7 [Enter]

Back to parent list

-----X-----X-----X-----X-----

Select an option:

1. Add a Book
2. Update a Book
3. Delete a Book
4. View a book

5. View all Books

6. Exit Menu

Your option: 5

How do you want to display the list?

1. In Ascending order of id
2. In Descending order of id
3. In Ascending order of book name
4. In Descending order of book name
5. In Ascending order of price
6. In Descending order of price
7. Exit

Your option: 6

id	name	price	author
3.	Java -TCR	450	Herbert Schildt
2.	Let Us C++	300	Ramesh Das
1.	Let Us C	200	Yashwent Kanitkar

On clicking 7, we should come back to parent list

-----X-----X-----X-----X-----

Select an option:

1. Add a Book
2. Update a Book
3. Delete a Book
4. View a book
5. View all Books
6. Exit Menu

Your option: 2

[Here: first the details of book with id = 2 should display]

id	name	price	author
2.	Let Us C++	300	Ramesh Das

[Update process begins]

Enter new book name : Let Us CPP (previously C++)

Enter new book price : 350 (previously 300)

Enter new book author : Ramesh Das (unchanged)

[Enter]

The book: Let Us CPP with id 2 is updated successfully.

[Back to the parent menu]

-----X-----X-----X-----

Select an option:

1. Add a Book
2. Update a Book
3. Delete a Book
4. View a book
5. View all Books
6. Exit Menu

Your option: 3

[Here, first the details of book with id = 3 should display]

id	name	price	author
3.	Java-TCR	450	Herbert Schildt

Enter the id of the book to delete : 3

On enter book with id 3 should delete

Result : [The book: Java-TCR with id 3 is deleted successfully]

-----X-----X-----X-----

Select an option:

1. Add a Book
2. Update a Book
3. Delete a Book
4. View a book
5. View all Books
6. Exit Menu

Your option: 6

Are you sure you want to exit (y/n) - y

[Enter]

Thanks for using our portal.

Visit again soon !!

-----X-----X-----X-----

Instructions:

1. Create the project by your name (not full name), for ex: Kaustubh
2. The name of the schema should be: book_store
3. The name of the table should be your name<_books>, for ex: kaustubh_books
4. First create the schema: book_store manually
5. As the project's main () is executed, the table should be automatically created
(Use create if not exists table query)
6. Use Scanner to get values
7. Use DAO layer for database work
8. The database credentials should not be hard coded

9. The database credentials have to be read from a file **db_credentials.txt** which should be placed in the root folder.
10. The format of data in db_credentials.txt should be:
URL: jdbc:mysql://localhost:3306/book_store
USERNAME: <your-username>
PASSWORD: <your-password>
11. Before submitting and zipping the project, change username to **root** & password to **1234** in **db_credentials.txt**
12. Follow the naming conventions
13. Format the code properly before submission
14. Do proper exception handling
15. On exception if the code terminates abnormally, it enjoys **negative marking**
16. Try to use some new concepts such as Lambda Expressions, Optional, Streams API etc.
17. If you want to get innovative with something , you are welcome but make sure that the stated functionality is working
18. Test your code with multiple inputs before submitting.
19. Keep the zipped project with you, in the evening I will share the drive link for 15 minutes, upload it then and there
20. Once submitted, there is no going back
21. This project will decide **Capstone Project Teams**
